# Agenda

- Duality Review
  - Motivation example
  - Weak/Strong duality, duality for LPs
  - Farkas Lemma
- Taking the dual example
- Dual of  $l$  norm example

## Logistics

- HW 5 out, due Friday March 25 at 9pm
- HW 6 due Friday April 1 at 9pm
- Midterm 2 on Tuesday April 12

## Duality motivation / obtaining lower bounds

- We want to get a lower bound for

$$\begin{array}{ll}\min & x_1 + 3x_2 \\ \text{s.t.} & x_1 + x_2 \geq 2 \\ & x_2 \geq 1 \\ & x_1 - x_2 \geq 3\end{array}$$

## Farkas Lemma

Given  $A$  and  $b$ , one of the following 2 statements true

1.  $\exists x$  s.t.  $Ax=b, x \geq 0$
2.  $\exists y$  s.t.  $A^T y \geq 0, b^T y < 0$

## Dual of std LP

$$\begin{aligned} \min_x \quad & c^T x \\ \text{s.t.} \quad & Ax = b \\ & x \geq 0 \end{aligned}$$

$$\begin{aligned} \max_y \quad & -b^T y \\ \text{s.t.} \quad & A^T y + c \geq 0 \end{aligned}$$

Inequality form

$$\begin{aligned} \min_x \quad & c^T x \\ \text{s.t.} \quad & Ax \leq b \end{aligned}$$

$$\begin{aligned} \max_y \quad & -b^T y \\ \text{s.t.} \quad & A^T y + c = 0 \\ & y \geq 0 \end{aligned}$$

Example: find the dual

one way: pattern matching

$$\begin{aligned} \min_x \quad & 3x_1 + 4x_2 \\ \text{s.t.} \quad & x_1 + x_2 \geq 5 \\ & 2x_1 + x_2 \geq 6 \\ & x \geq 0 \end{aligned}$$

Other way: derive the dual

$$\begin{aligned} \min_x \quad & c^T x \\ \text{s.t.} \quad & Ax \geq b \end{aligned}$$

Dual of  $1$  norm problem

$$\begin{array}{ll} \min_x & c^T x \\ \text{s.t.} & \|Ax + b\|_1 \leq 1 \end{array}$$

a, formulate this LP inequality form

b, derive the dual LP and show that it's equivalent to

$$\begin{array}{ll} \max_z & b^T z - \|z\|_\infty \\ \text{s.t.} & A^T z + c = 0 \end{array}$$

c. give a direct argument that whenever  $x$  is primal feasible and  $z$  is dual feasible,  $c^T x \geq b^T z - \|z\|_\infty$

$$\begin{array}{ll} \min_x & c^T x \\ \text{s.t.} & \|Ax + b\|_1 \leq 1 \end{array}$$

$$\begin{array}{ll} \max_z & b^T z - \|z\|_\infty \\ \text{s.t.} & A^T z + c = 0 \end{array}$$
