## Mixed integer program

$$\begin{aligned} \min_{\mathbf{x}} \quad & \mathbf{c}^T \mathbf{x} \\ \text{s.t.} \quad & \mathbf{A}\mathbf{x} \leq \mathbf{b} \\ & x_i \in \mathbb{Z}, i \in \mathcal{I} \end{aligned}$$

## Relaxation

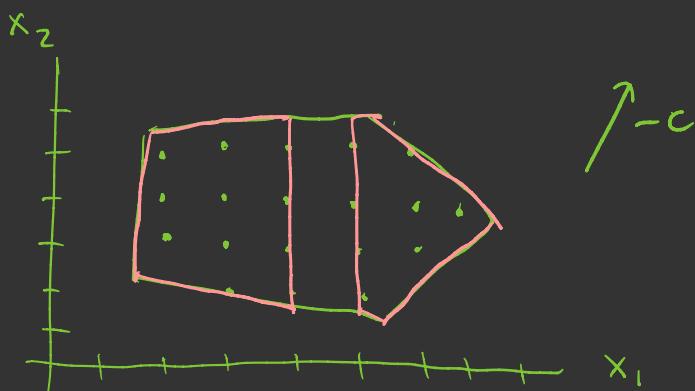

$$P^{\text{rel}} = \begin{array}{ll} \min_{\mathbf{x}} & \mathbf{c}^T \mathbf{x} \\ \text{s.t.} & \mathbf{A}\mathbf{x} \leq \mathbf{b} \end{array} \quad P^{\text{rel}} \leq P^{\text{IP}} \quad \text{way to achieve LBs}$$

If  $\mathbf{x}^{*\text{rel}}$  is integer then  $P^{\text{rel}} = P^{\text{IP}}$ ,

- this happens if  $\text{conv } P = \{\mathbf{A}\mathbf{x} \leq \mathbf{b}\}$

## Branch & Bound

- main idea: divide & conquer

Partition into smaller sets

Solve subproblems

$$\underline{\Phi}(S^j) = \min_{\mathbf{x}} \mathbf{c}^T \mathbf{x} \quad \text{s.t. } \mathbf{x} \in S^j$$

$$\underline{\Phi}_{LB}(S^j) \leq \underline{\Phi}(S^j) \leq \underline{\Phi}_{UB}(S^j) \quad \text{any feas. point}$$
